

Preforming 2.0

Additive Preform Manufacturing

Tailored Blank's: Cost Effective and full flexible Preform Production

Additive Manufacturing of tailored blanks at Compositence:

- best possible material utilization due to low cutting waste rates (less than 5%)
- reduced incidental costs (raw material logistics, storing, ...)
- allows to reinforce parts locally, a load path optimized part design
- is fully automated & capable to fulfill automotive volume demands

Replace your expensive Organic Sheet!

Key Technical Parameters:

- (Carbon) Thermoplastic Tape 12 mm width
- 2D Placement for high productivity
- max. stack size: 1.800 x 1.400 mm

**Fully compatible with Thermoforming
and Injection Molding Processes!**
